Confidence in partial recovery

- ANZ-Roy Morgan Australian Consumer Confidence made a partial recovery last week, rising 0.6% after the prior week's 1.2% drop.
- Current finances dropped 2.4%, however. This component is now down nearly 10% from its August high. Future finances gained 0.4%, taking it back above its long term average.
- Current economic conditions gained 0.3%, while future economic conditions declined by 1.1%. Both the subindices are below their long-term average.
- The 'Time to buy a household item' measure gained 5.1%. There have been some big up and down swings in this measure in recent months, but it remains below its long-run average.
- Inflation expectations were stable at 4.1%.

ANZ-Roy Morgan Consumer Confidence and inflation expectations

Last week (19–20 Oct)	Weekly change, %	Four-week average	Monthly average since 1990	Inflation expectations (4-week ma)
111.6	0.6%	112.4	113.1	4.1%

Data collected last weekend (Saturday and Sunday), based on around 1,000 face-to-face interviews. Not seasonally adjusted. Further data history on page 6.

ANZ Head of Australian Economics, David Plank, commented:

Confidence eked a small gain on the back of a strong rebound in the 'Time to buy a household item' subindex. Outside of this, the results were mixed, perhaps reflecting the news flow over the week. On the positive side, Australia's unemployment rate moved lower on the back of a decent employment report. But the IMF's downgrade to Australia's economic outlook attracted a lot of attention, as did the slowdown in China's data. Of particular note, current finances dropped 2.4% – the second big fall in the past three weeks. This measure is still well above average, but is now down close to 10% from its August high. If consumers lose confidence in their own finances when they are also worried about the broader economic outlook then there may be a material impact on spending.

Confidence gained 0.6%
